## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 6, 10-12, 14, 15 and 19-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Meidan (5,276,907).

Meidan discloses an adaptive antenna comprising; a plurality of antenna elements (104 and 102) for forming a plurality of beams that cover a predetermined service area; detecting means for detecting a communication amount of data transmitted or received with each of the beams (this is taught by the structure required to determine an overloaded spread spectrum cell sector per column 7, line 22); and controlling means (column 7, lines 50-55; figure 1) for controlling a direction and width of each of the beams corresponding to the detected communication amount).

The structure recited above reads on claim 1.

Claims 2, 3, 5 and 6 read on the operation of the system disclosed by Miedan as it responds to changing user patterns within a cell.

Claims 10-12, 14, 15 and 19-22 are taught by the structure applied to claims 1-3, 5 and 6.

Claim Rejections - 35 USC § 103

Application/Control Number: 09/924,501

Art Unit: 3663

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, 7, 8, 9, 13, 16, 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meidan in view of Shoki (5,894,598).

Shoki is cited to show that it was known at the time of the present application to use phase and amplitude weighting (figure 3 and figure 8) to shape and steer a beam in a communication cell.

It would have been obvious to have used this type of structure in the system disclosed by Meidan because Meidan required the ability to change beam width and direction quickly.

The combination of Meidan and Shoki produces the structure recited by claims 4, 7, 8, 9, 13, 16, 17 and 18.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 571 272 6981.

/Mark Hellner/

Primary Examiner, Art Unit 3663
